New Vögele Super 700 Paver Delivered to MCK Services, Inc.

MCK Services, Inc.'s Mark Hazen and Brian Hersh demonstrate the new Vögele Super 700 Paver.

For over 12 years, Martinez-based MCK Services, Inc. has been a leading grading and paving contractor serving Northern California. Mark Hazen saw the need for a compact, high production, variable paving width machine to handle their specialty applications. These jobs include trench paving, patching and specialty work for public works agencies and major utilities. This new Super 700 does it all. The exclusive electrically heated AB 200V vibratory extending screed provides infinitely variable paving widths from 3 ft. 8 inches to 6 ft. 7 inches. With available attachments, this versatile paver can be configured for widths from 20" to over 10 feet. It features laydown rates of up to 275 tons/hr at paving speeds up to 200 fpm, the ability to laydown mat within 2" of a curb or guardrail and a clearance width of only 4 feet allowing access to the most difficult sites. When you have a paving application with tough access and tight clearances, call Mark Hazen at (925) 957-9200 for the solution. And when you need paving equipment, expert advice and the best products, support and customer service, call the professionals at Nixon-Egli Equipment Company.
